

Woonerf System

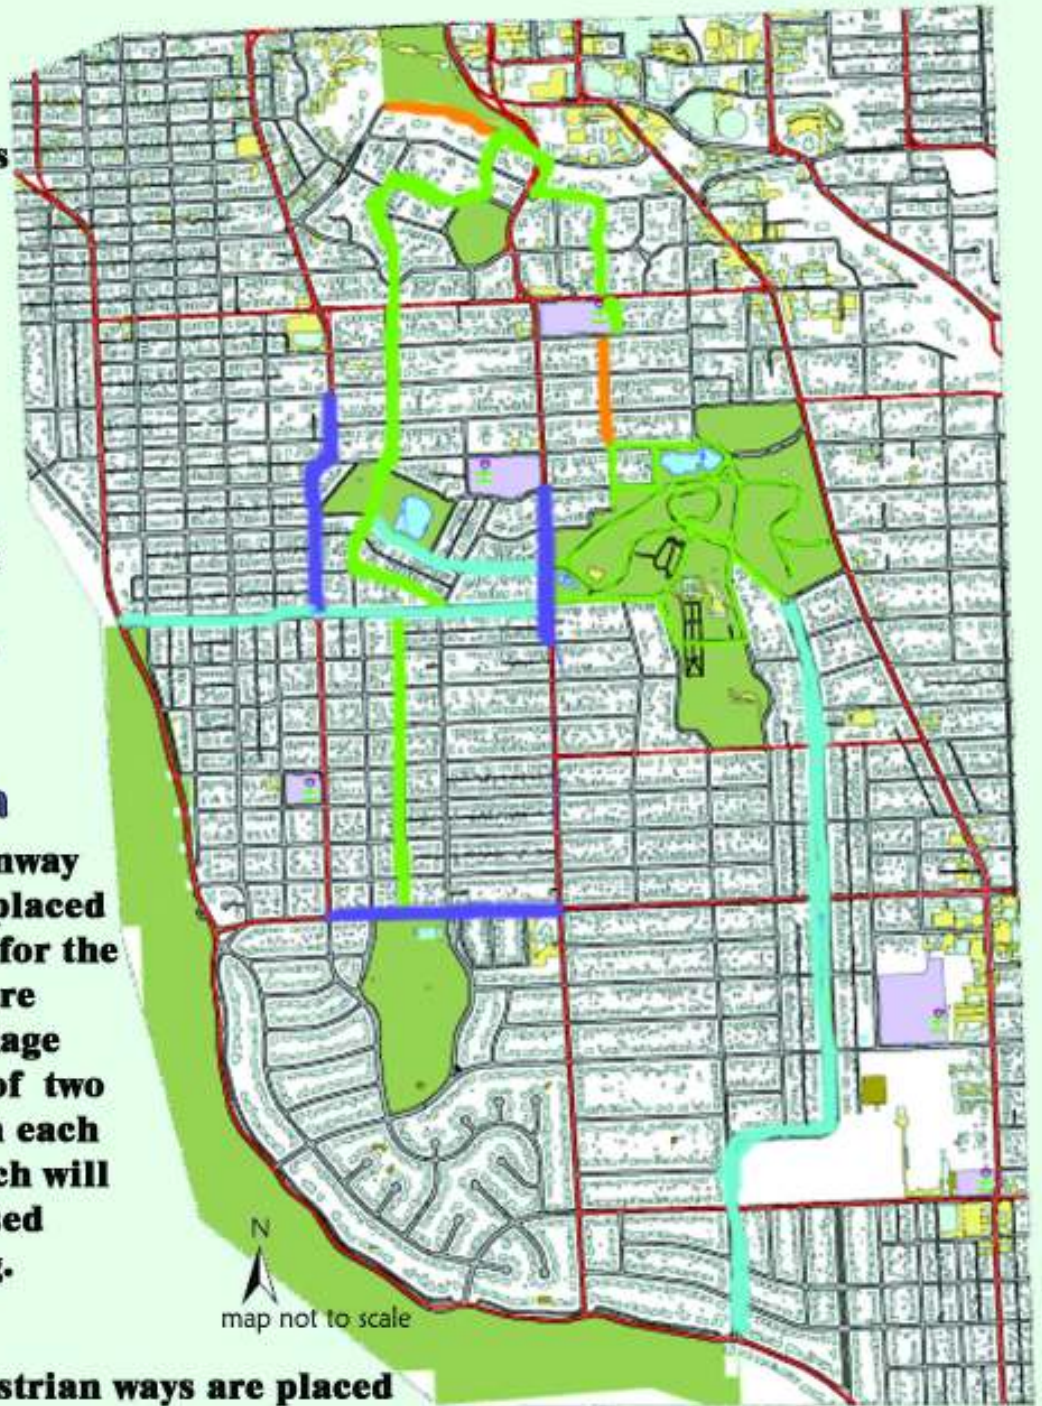

The proposed woonerf system uses both the GIS woonerf model and personal observations. The path was created along the criterion of linking the relevant city parks, taking into account ease in arterial crossing, least auto use, and mildest slope change.

Greenway System

The proposed Greenway systems have been placed as entry indicators for the parks systems that are involved in the linkage path. A minimum of two blocks was given on each side of a street which will be used as a proposed pedestrian crossing.

Pedestrian Way

The proposed pedestrian ways are placed in areas with little or no traffic which can be converted into large footpaths. The paths will allow for limited vehicle access for maintenance and driveway access. Cliff drive has awesome views of the greater Spokane area and McCellan is linked to Roosevelt Elementary.
